- Learn linear mapping between the source and target spaces

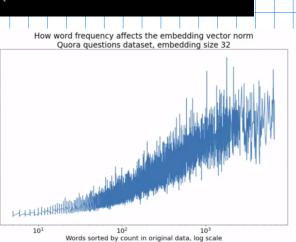

$$W^{\star} = \operatorname*{argmin}_{W \in M_d(\mathbb{R})} \lVert WX - Y \rVert_{\mathcal{F}}$$

• The translation of source word is $t = \operatorname{argmax}_t \cos(Wx_s, y_t)$.

Word embeddings in different languages

Comment: mapping between two languages can be done completely in unsupervised manner with GANs.

We will meet later.
